

VFS

Time to think Out-of-The-Box

New for 2011, the Virtual FaxCore Server Appliance (**VFS Appliance**) packages are specifically architected for the 21st Century.

With the introduction of our Mini-Appliance product line, FaxCore combined the robust features of our award-winning FaxCore product with the convenience of a fully assembled appliance. The Mini is an embedded appliance designed to fax enable your environment. No operating system or application software is required. The appliance is shipped configured and ready to deploy. The Mini-Appliance models run on an IP enabled network and are licensed for unlimited users and up to 8 fax channels.

The next FaxCore appliance introduced was another multiple award winner, the FoIP-BOX appliance. The FoIP-BOX is tested and certified for carrier level environments and suitable for enterprises of all sizes. The FoIP-BOX can include a Dialogic Media Gateway (DMG) and Brooktrout SR140 Fax over IP Drivers pre-installed or just SR140 drivers for T.38 compliant PBXs or Routers. The appliance is shipped configured and ready to deploy.

Now, with the **Virtual FaxCore Server Appliance** you can run totally “*out-of-the-box*”. The **VFS Appliance** packages are specifically intended for deployment in a Virtual Environment. Physical servers are not required yet FaxCore has retained all of the convenience of FaxCore appliances bundled with physical servers. The VFS models are e-delivered and installed remotely by FaxCore support engineers. **How easy can it get?**

The VFS Appliance includes:

- FaxCore Standard Server License included or Enterprise Server License for 10 ports or greater
- Unlimited user accounts.
- FaxCore IP Fax Printer Driver – for XP, Vista and Windows 7
- Microsoft Exchange and POP3/SMTP integration
- Web Service/SOAP.NET SDK
- Remote Installation
- First Year of Maintenance – unlimited tech support & all software upgrades & updates.
- ½ day (4 hours) of remote installation & training assistance.
- Dialogic SR140 Drivers
